EXPERIENCE

Software Engineer Kathmandu

Riddhsoft Jun, 2026 - Present

Working as a Software Developer focused on building and maintaining scalable ASP.NET Core/.NET Web APIs and backend business logic. Responsible for the complete backend development lifecycle, including API design, implementation, testing, publishing, and deployment to IIS, ensuring successful end-to-end delivery of production-ready services. Integrated backend systems with React and Next.js frontends, designed and optimized relational databases, managed complex data relationships such as composite keys, and maintained data integrity. Additionally, expanded expertise in CI/CD, deployment workflows, and DevOps practices while collaborating within an Agile development environment.

Software Developer Kathmandu

Codebee Nepal Mar, 2025 - Dec, 2025

Results-driven .NET Developer with professional experience in .NET Framework, Blazor, and RESTful Web APIs. Skilled in integrating Windows Services, webhooks, and building scalable backend solutions. Experienced in structured Agile environments using tools like Jira for task and workflow management. Adept at delivering clean, maintainable code and collaborating in cross-functional teams to meet business objectives.

Software Developer Intern Kathmandu

Giga Infosoft Dec, 2024 - Feb, 2025

During my internship, I worked with the ASP.NET MVC framework to develop modules following the Model-View–Controller architecture. I implemented full CRUD operations across controllers, views, and models, and used Entity Framework with LINQ queries for database connectivity and data manipulation. I also designed responsive Razor Views using HTML, CSS, and Bootstrap to enhance the user experience. Additionally, I handled form validation and facilitated smooth data transfer between the controller and view through ViewBag and Model Binding.

EDUCATION

Bachelor's in Computer Engineering Kathmandu

Advanced College of Engineering and Management

PROJECTS

Foodoto: The food recognizer

- Developed a food recognition system to identify food items and estimate calories from images.
- Used a CNN with InceptionV3 and transfer learning on a custom, augmented dataset achieving approximately 90% accuracy.
- Provided food names and calorie information using deep learning for practical AI application.

https://aayushmlk-foodoto.hf.space/

Blockchain Based Bloodbank Management System

- Developed a Blood Bank Management System using Ethereum blockchain to enhance transparency and security.
- Implemented smart contracts for automated donor registration, inventory management, and transaction validation.
- Provided real-time blood availability through a user-friendly interface, ensuring trust and efficient resource management.

Bug Tracker

- Developed a Bug Tracking System using .NET 6 and MVC architecture for scalable web application design.
- Implemented secure user authentication, session management, and database operations using EF Core.
- Optimized SQL Server database and integrated backend APIs with frontend for dynamic full-stack functionality.

https://github.com/Adesh7766/Bug-Tracker

EstadioIQ

- Developed a football analytics API using ASP.NET Core Web API to analyze player and match statistics.
- Designed relational database models with EF Core and SQL Server, supporting filtering, pagination, and file uploads.
- Implemented RESTful endpoints and advanced analytics, integrating real-time external data for performance insights.
